

Say goodbye to varicose veins

A safe and minimally invasive way to eliminate painful and unsightly veins

NG Vascular & Vein Center
Comprehensive Vascular and Interventional Care

What causes varicose veins?

Varicose veins are enlarged, swollen veins that rise above the surface of the skin. They are caused by a condition called venous insufficiency, wherein valves that are designed to prevent blood from flowing backwards become weak and allow blood to pool in the vein.

40% of women and 25% of men are affected by this condition. The underlying causes include heredity, age, prolonged standing, exposure to the sun, hormone changes or weight gain.

In addition to the unsightly appearance of varicose veins, the condition can also be painful. Delaying treatment can also lead to more serious complications, including inflammation, blood clots, skin ulcers, bleeding and deep vein thrombosis.

BEFORE

AFTER

NG Vascular's varicose vein treatments can help you achieve proven results without the discomfort and lengthy recovery of surgical ligation and vein stripping. Dr. Golewale is one of the most experienced physicians in the region, having performed over 4,000 minimally invasive vein treatment procedures.

If you're one of more than 25 million Americans who suffer from uncomfortable and unsightly veins, you should know about a non-surgical treatment offered by NG Vascular that's safe, virtually painless and requires little to no downtime.

WE OFFER EFFECTIVE, FDA-APPROVED PROCEDURES TO ELIMINATE VARICOSE VEINS

Radiofrequency ablation is a fast, minimally invasive procedure to close the affected vein(s). It uses radiofrequency energy to seal the vein, which will shrink and disappear over time. Blood is re-routed by the body through other, healthier veins. This outpatient procedure is covered by most insurance plans and Medicare and offers far less risk of complications than conventional surgery. You can resume normal activities immediately after the procedure.

VenaSeal™ is a state-of-the-art treatment that uses a special adhesive to seal the vein. Unlike thermal-based procedures, VenaSeal protects against the possibility of nerve injury or skin burns. As with radiofrequency ablation, you can resume normal activities immediately. This procedure is also covered by most insurance plans and Medicare.

TAKE THE FIRST STEP

We invite you to visit one of our conveniently located outpatient centers for a free screening where we will help you understand the underlying cause of your condition, discuss treatment options and show you how you may be able to prevent recurrences.

Please call us at 219-208-6218 to schedule your FREE consultation.

NG Vascular & Vein Center

Comprehensive Vascular and Interventional Care

NG VASCULAR AND VEIN CENTER

At NG Vascular & Vein Center, we offer less invasive treatments for various conditions, from peripheral artery disease (PAD), varicose veins, knee osteoarthritis, uterine fibroids and several other painful and often life-threatening conditions.

With offices throughout Northwest Indiana & greater Chicago area, our treatments are outpatient based, with a faster recovery and minimal discomfort.
