

Treatment for Chronic Pain

Achieve lasting pain relief without
surgery or a lifelong medication regimen

NG Vascular & Vein Center
Comprehensive Vascular and Interventional Care

Thanks to advances in medicine, you don't have to live with the debilitating effects of chronic pain. NG Vascular offers a full complement of safe, fast and FDA-approved outpatient procedures for the treatment of painful conditions throughout the body—procedures that in many cases offer an alternative to potentially harmful drugs or invasive surgery.

Interventional pain management is a dynamic and constantly growing field. We specialize in treatment options that directly deliver therapy to the source of your pain with pinpoint accuracy. Using image guidance, we precisely target inflammation within your body's joints, soft tissues and bone structures for effective, lasting relief.

BACK PAIN

Conditions within the spine—such as a herniated disc—can cause inflammation that puts pressure on the nerves, resulting in numbness, tingling or pain. We offer a series of epidural and facet injections that treat the inflammation with lasting effects. Lower back and leg pain caused by swelling around the sympathetic plexus can also be treated.

PROCEDURES OFFERED

- Epidural (Cervical)
- Epidural (Thoracic)
- Epidural (Lumbar Interlaminar)
- Epidural (Lumbar Transforaminal)
- Epidural (Caudal)
- Facet Injection (Cervical)
- Facet Injection (Thoracic)
- Facet Injection (Lumbar)
- Botox® Injection for Migraine
- Small/Medium/Large Bursa Injection
- Calcaneal Spur Injection
- Costochondral Junction Injection
- Ankle/Knee/Hip/Shoulder/Wrist/Hand/
Foot/Elbow Injections
- SI Joint Injection
- Viscosupplementation Knee Injection
- TMJ Injection
- Plantar Fascia Injection
- Tarsal Tunnel Injection
- Tendon Injection
- Trigger Point Injection
- Nerve Blocks
- Celiac Plexus Block
- Sympathetic Plexus Block
- Piriformis Injection

JOINT PAIN

Pain within the hips, knees, ankles, heels, elbows and shoulders are treated with a number of techniques, including steroid injections, facet injections or viscosupplementation, which reduce inflammation and relieve pain within the tendons and soft tissues within joints. We also treat sacroiliac (SI) joint pain caused by pregnancy, weight gain, arthritis and other conditions, as well as pain within the temporomandibular joint (TMJ).

CHEST PAIN CAUSED BY COSTOCHONDRITIS OR TIETZE SYNDROME

An inflammation of the costochondral junctions of the ribs or the chest wall is a common condition that often results in chest pain, tenderness and other symptoms. Tietze syndrome is a less common condition that involves the swelling of cartilage around the rib cage. Both are treated with injections of anti-inflammatory medication.

ABDOMINAL PAIN CAUSED BY CANCER OR PANCREATITIS

These conditions can cause pain in the celiac plexus, a bundle of nerves that surrounds the abdominal aorta. A celiac plexus block is an injection of pain medication that relieves abdominal pain that may result from cancer or pancreatitis.

MUSCLE SPASMS AND KNOTS

A piriformis injection of BOTOX® can help to relax the muscle and reduce pain within the buttocks and posterior legs caused by piriformis syndrome. Trigger point injections are another technique we use for treating muscles that do not relax, and may form “knots” beneath the skin in different areas of the body, including the neck, shoulders, back and pelvis.

MIGRAINE HEADACHES

In addition to preventing wrinkles, BOTOX® is now a popular treatment for chronic migraine headaches. For adults with 15 or more days of migraines per month that last 4 or more hours, an injection of BOTOX® at 7 key areas of the head and neck can alleviate and prevent headaches. These injections are typically administered at 12 week intervals.

OTHER CONDITIONS

Nerve pain, pain caused by tarsal tunnel syndrome, fibromyalgia and other conditions may be treated with interventional pain management radiology techniques such as trigger point injections and nerve blocks.

If you have questions regarding our treatment options, call us! We are always available to talk to you and/or your doctor about our pain management services.

NG VASCULAR AND VEIN CENTER

At NG Vascular & Vein Center, we offer less invasive treatments for various conditions, from peripheral artery disease (PAD), varicose veins, knee osteoarthritis, uterine fibroids and several other painful and often life-threatening conditions.

With offices throughout Northwest Indiana & greater Chicago area, our treatments are outpatient based, with faster recovery and minimal discomfort.
